

Hill Holders

Features: Hill Holders

- Heavy duty 1/4" thick hill holders are produced of fire retardant resin and a combination of chopped glass spray-up and hand lay-up using woven roving glass reinforcement, which contributes greatly to their strength.
- The exterior is applied with a Munsell green gel-coat which contains UV stabilizer in addition to pigments and polyester resin for superior weatherability. The exterior has a textured gel-coated finish and the interior has a smooth gel-coated finish.
- The NHH-32-46-52 and NHH-32-54-52-MG have two horizontal ribs on the back side for added strength.
- The 2" flange around the entire perimeter provides stability.
